

# Could Your Child's Autism Be Related to Allergies?

## Commonly Seen Autistic Traits:

Abnormal appetite	Impaired peer relationships
Abnormalities in speech	Impulsive
Accident prone	Increased thirst
Aggressive	Irritable
Always climbing	Lacks concentration
Appears deaf/dumb	Loud talk
Biting nails	Muscle aches
Biting own body parts	Nightmares
Bladder problems	No eye contact while communicating
Cannot be pacified	Nonstop talk
Cannot determine right from wrong	Normal or high I.Q. in certain areas
Cannot tie shoes	Parrot-like talking
Clumsiness	Pinches or hurts others
Compulsive touching	Poor eye-hand coordination
Constant motion	Post nasal drip
Destructive	Preoccupation with parts of objects
Dizziness	Preoccupation with narrow interests
Does not ask for help when needed	Profuse sweating
Eating dirt	Protruding abdomen
Enuresis (bed wetting)	Puffy below the eyes
Erratic disruptive behavior	Pushing people away
Excessive drooling	Red cheeks and earlobes
Excessive flatulence	Restlessness
Excessive salivation	Salt craving
Excessive sweating	Screaming inconsolably
Facial changes	Self-abusive
Fat craving	Sensitive to cold or heat
Fatigued, weak, weary, listless	Sensitive to odors
Following routines to precise detail	Sensitive to sound or light
Frequent burping	Spinning
Frequent flue and colds	Spurns affection and cuddling
Growing pains	Staring at people
Hair pulling	Sugar craving
Hand flapping	Tantrums
Head banging	Totally nonverbal
High pain threshold	Twisting
Holds onto people/objects	Uncontrollable body movements
Hyperactivity	Uncooperative
Impaired ability to role-play	Violent behavior at times
Impaired social play	
Impaired ability to initiate speech	

## Treat the Cause...Not Just the Symptoms

Yes! Undiagnosed allergies can cause a variety of health disorders including autism. Autism affects one of 150 children in the U.S. today and is quickly becoming the epidemic of the 21st century. It is characterized by abnormal social relationships, language disorders with impaired understanding, compulsive behavior, and uneven intellectual development often with mental retardation.

### Allergy-Related Autism is Treatable? That's right.

Autism can be viewed as an allergic response or cascade of allergic responses to many allergens at one time. Through the innovative process of **Nambudripad's Allergy Elimination Techniques (NAET)**, allergies can be treated in a natural, painless and non-invasive way. And, NAET can complement other medical therapies requiring the use of pharmaceutical drugs, such as antibiotics, chemotherapy, and radiation.

### A Revolutionary Solution

NAET uses a blend of testing, treatment procedures and energy balancing from acupuncture/acupressure, allopathy, chiropractic, nutritional, and kinesiological disciplines of medicine. **One allergen is treated at a time.** By removing the blockages from the energy pathways, NAET allows the brain and body to regain balance and normal function.

### Learn Self-Treatment Techniques and Save Money!

Rarely is someone allergic to just one substance. It is usually a number of allergens that has caused your immune system to become weakened to the point that you have symptoms. A child with autism is allergic to many foods, chemicals and environmental agents. **By learning the techniques used with NAET**, you can reduce the number of in-office visits saving you time and money!

### Experience the Freedom from Allergies Today!

Call for your initial consultation today. The first appointment will include a medical history, explanation of NAET and a treatment. Feel better TODAY!
