Growing pains	Twisting
Hair pulling	Uncontrollable body movements
Hand flapping	Violent behavior at times
Head banging	
High pain threshold	
Holds onto people/objects	
Hyperactivity	

Treat the Cause...Not Just the Symptoms

Yes! Undiagnosed allergies can cause a variety of health and behavioral disorders in children. These disorders are characterized by abnormal social relationships, language disorders with impaired understanding, compulsive behavior, and uneven intellectual development often with mental retardation.

My child's behavior could be caused by allergies? That's right.

Through the innovative process of **Nambudripad's Allergy Elimination Techniques (NAET)**, health and behavioral disorders in children can be treated in a natural, painless and non-invasive way. And, NAET can complement other medical therapies requiring the use of pharmaceutical drugs, such as antibiotics, chemotherapy, and radiation.

A Revolutionary Solution

NAET uses a blend of testing, treatment procedures and energy balancing from acupuncture/acupressure, allopathy, chiropractic, nutritional, and kinesiological disciplines of medicine. **One allergen is treated at a time.**

By removing the blockages from the energy pathways, NAET allows the brain and body to regain balance and normal function.

Learn Self-Treatment Techniques and Save Money!

Rarely is someone allergic to just one substance. It is usually a number of allergens that has caused your immune system to become weakened to the point that you have symptoms. A child could be allergic to many foods, chemicals and environmental agents.

By learning the techniques used with NAET, you can reduce the number of in-office visits saving you time and money!

Experience the Freedom from Allergies Today!

Call for your initial consultation today. The first appointment will include a medical history, explanation of NAET and a treatment. Feel better TODAY!
